Plain Tube >>>

Usage: Applying to blood specimen collection and storage for biochemical, immunological and serum clinical examination. Whether it is glass or plastic tube, the wall is extremely smooth, and can effectively prevent blood cells attaching to the wall, which can minimize the specimens in vitro hemolysis.

Gel and Clot Activator Tube >>>

Usage: Applying to the acquisition of high-quality serum, specimen for biochemical, immunological and serum clinical examination. Serum separation gel is a kind of semi-solid inert gel, composed of several compounds and synthesized by medical polymeric material. After blood centrifugal, the specimen can be separated into serum top, separation gel middle and blood corpuscle lower. In the middle of the tube, a thick layer of separation gel can completely isolate serum from blood corpuscle, so as to ensure the purity of serum.

Pro-Coagulation Tube >>>

Usage: Applying to fast collection of blood specimen for biochemical and immunological clinical examination. A kind of coagulant, which is different from other chemical coagulants having effects on the test results, was sprayed evenly on the inner wall of the tube to speed the blood solidification without any heating devices (such as water container). After blood collection, let the tube stand for 15 minutes(make sure the ambient temperature over 16°C), and then you can get the ideal and high purity serum.

ESR Vacuum Tube >>>

Usage: 1.28ml tube with a total capacity of 1.6ml, is equipped with 0.129mol/L sodium citrate 0.32ml. Collect blood 1.28ml to the central scale and after blood collection, we immediately invert the tube gently for 4-5 times so as to mix blood completely with anticoagulant, then put the tube into a D2010 automatic ESR analyzer and after 30 minutes read the data. This product can save time and effort and at the same time prevent cross infection.
